

Iliass Elyaakoubi Benssaleh MSc

London

iliasselyaa@hotmail.com | 07770956895

MSc Artificial Intelligence graduate with a First-Class Honours in Computer Science. Experienced in machine learning, computer vision, web development, and AI-driven problem-solving, with hands-on experience as a Graduate Data Scientist at Rebel Energy Labs.

WORK EXPERIENCE

Graduate Data Scientist, Rebel Energy Labs, London

Nov-April 2025

- Developed a **Fish Counter** for a seagrass re-wilding charity using **YOLOv8/11** and **ByteTrack**, enabling accurate tracking of fish populations in restoration projects.
- Build a full-stack exception management system using Django, TailwindCSS, Plotly, and Polars, **reducing 20%** of exceptions since release.
- Performed **business-facing data analysis** using **SQL** and **PySpark**, engaging in **requirement gathering** to extract insights and optimize workflows based on stakeholder needs.
- Designed and proposed a **payment allocation model** to improve the efficiency and accuracy of the business's bulk billing process, ensuring smoother payment handling and better financial management.
- Managed and mentored data analysis interns, providing guidance and **technical QA**.
- Conducted **anomaly detection research**, evaluating multiple techniques such as **Isolation Forest**, **Autoencoders**, **Local Outlier Factor (LOF)**, and **Clustering** to enhance data-driven decision-making.
- Engineered RegulationsLLM, an AI compliance assistant using **LangChain**, **RAG**, and **prompt engineering** that extracts insights from Ofgem regulations through a Streamlit interface, enabling non-regulatory teams to easily understand compliance requirements.

Computer Vision trainee, Checklens, Cyprus

April-July 2024

- Collaborated with the head of the Computer Vision team, gaining hands-on experience in **object detection** for self-checkout systems.
- Applied **deep learning** techniques to develop a model capable of accurately detecting items in real-time.

Web Technology Intern, Softwire, London Office

October 2019

- Shadowed employees in the web development division and gained an insight into project management and teamwork with other employees.
- Developed a quiz website using **HTML**, **CSS**, and **JS**. The website extracted data from an API and automatically displays the quiz results.

EDUCATION

MSc Artificial Intelligence, Queen Mary University of London (Distinction)

2023-2024

Relevant modules: Machine Learning (75.5%), Neural Networks and NLP (95.2%), Artificial Intelligence (93%), Computer Vision (72.3%)

BSc Computer Science, Queen Mary University of London (First Class with Honours)

2020-2023

First year grade: 1:1 (85%), Second year grade: 1:1 (80%), Third year grade: 1:1 (81%)

Relevant modules: Algorithms & Data Structures (93.2%), Software Engineering (72.4%), Deep Learning and Neural Networks (81%)

TECHNICAL SKILLS

Python | Java | HTML & JS | Django | Figma | Pytorch | TensorFlow | React | Keras | SQL | DBT | GIT | Azure DevOps

PROJECTS

Football player detection – Developed a real-time football player detection and tracking system using **YOLOv8**, combined with advanced tracking algorithms such as **ByteTrack** and **DeepSORT**. The system ensures accurate player identification and continuous tracking across frames, enabling detailed performance analysis and providing valuable tactical insights for match evaluation.

CIFAR-10 Image classification – Developed a deep convolution neural model to classify pieces of clothing using a custom backbone made up of convolutional and linear layers. Accuracy achieved: 96%.

VisionBuilder – A user-friendly drag-and-drop website builder designed for developers. It allows seamless integration of pre-existing code into the design interface, enabling real-time code viewing and editing. The streamlined workflow ensures easy export of completed designs as HTML and CSS files, blending the complexity of coding with the simplicity of visual design.

upReach Tech500 and Samsung Hackathon – Effectively led a diverse team of students to brainstorm, develop and create an app design/system based on raising awareness of local business. Utilised Figma to design a mobile app and employed a variety of problem solving, leadership and technical skills, and delivered a presentation to industry professionals.

Online Examination System – Object oriented system developed using HTML, JS, and jQuery. Worked in a group of students, designed the system using domain model analysis and delivered a presentation to an industry professional. This project was awarded 'Best Software Engineering Project'.

Weather app – Used React JS and OpenWeather API to deploy a mobile app targeted at farmers. Features of the app include weekly and monthly forecast, agriculture suggestions and dynamic backgrounds.
